

General Index

General Index

The scope of this book can best be determined by the Contents on pages 4 and 5. The chapters and prime references are shown in bold face. Tables are indicated by T followed by chapter, table number and page number. (T 4.16, 118)
(Corrections or suggestions are invited.)

A

Aerial sewers 212-213
Aircraft loads, minimum cover for
T7.17, 210, T7.18, 211, T7.19, 212,
T7.21, 213
Alignment changes of CSP 268
Allowable span, ariel sewers T7.22, 214
Alternate designs and bids on pipe
235-238
Annular CSP, description 7
Antecedent Moisture Conditions
(AMC) 67
Arch channels 17
Arch (pipe-) elbow fittings, minimum
dimensions T1.15, 24
Arches (pipe-) layout details T1.7, 13;
T1.8, 13
Assembly of CSP field units 215-218

B

Backfilling procedure 269-272
Backwater analysis in hydraulic design
125-133
Basins, maintenance on, 275-276
Bend losses 113
Bernoulli equation 91-92
Blue-green storage 170
Bucket line for cleanout 279

C

Catch basin(s) 27
 maintenance on 278
 reinforcing 29
 tops 28
Chemical analyses 50
Coatings 34
Combination system 180-184
Compressed air jet for cleanout
279-280
Computer models 84, T3.8, 85, 157, 159
Connectors 17-20
Construction, Chapter 10, 253-273
 plans in sewer excavation 253

Contents 4-5
Conversion tables 289-296
Corrosion
 from soil 221
 from soil vs. electrical resistivity
 T8.1, 229
Corrosiveness of soils T8.2, 230
Corrugated Steel Pipe
 annular 7
 data 8-16
 helical 7
 sizes T1.1, 8
Couplings systems 17-20
Critical flow depth 93-97
Curve numbers T3.6, 69

D

Depression storage 64
Depression (typical) T3.3, 65
Depth of cover T7.6-T7.16, 202-209
Design
 and bids on pipe, alternate 235-238
 of stormwater detention facilities
 165-169
 Structural, Chapter 7, 193-219
 techniques 179
Detention pond design T6.1, 169
Detention facilities 161-164
Dewatering of trenches 261-263
Dimensions
 for elbows for round CSP T1.13, 22
 for CSP pipe-arch elbow fittings
 T1.15, 24
 for CSP round fittings T1.14, 23
Disclaimer 2
Drain inlets, slotted 32
Drainage
 from **Storms, Chapter 2**, 37-53
Durability
 factors affecting 221-225
 design 226-228
 Chapter 8, 221-231

E

Elbows, dimensions, minimum
T1.13, 22; T1.15, 24
Energy loss
in hydraulic design 95, 129-131
solution T5.1, 127
Entrance loss 111
coefficient T4.15, 111
Environmental Considerations 46-52
EPA regulations (proposed) T2.3, 50
Excavation of trenches 255-262
Exfiltration
analysis 185
calculations 185-186

F

Field joints 17-20, 216-218
Field layout, alignments and
installation 264-267
Field test 177-179
Fire hosing flushing for cleanout 280
Fittings 21
Fittings and sewer appurtenances,
CSP 21
Flooding 89
Flow regulators 170
Form losses in junctions, bends and
other structures 108-113
Foundation drains 44-46, 157
collector design sheet T5.10, 158
in a major/minor system 155-157
Friction losses 101-105
equation 105-106

G

Gaskets 17-19, T1.12, 17
General Tables 297-298
Ground water
monitoring 52
quality process 48-51

H

Handling weight of CSP T1.2-1.5, 8-11
Helical CSP, description of 7
Highway
live loads T7.3, 199
loadings 193

Hydraulics

alternatives, methods for
determining 134-138
calculations T5.2, 128; T5.7, 152
jump 108
properties of conduits T4.2 -
T4.7, 99-100
Of Storm Sewers, Chapter 4
89-123
Hydrograph method of stormwater
detention 165-169
Hydrology, Chapter 3 55-87

I

Indirect method of soil investigation
and infiltration tests 179
Infiltration 43
basins 172
systems, maintenance on 275-278
trench 172-173
Interior coatings
storm sewers 226

J

Joint
properties 217-218
types 217

K

Kutter equation 102-105

L

Layout
details for CSP pipe-arches
T.17-1.8, 13
details for structural plate pipe-
arches T1.9-1.10, 14-15
Lead contamination 48
Linear recharge system 179
Live loads, highway and railway
T7.3, 199
Loadings in structural design 193
Loss of head T4.12-T4.14, 110-111

M

Maintenance, Chapter 11 275-287
Major drainage system 37; 39
of storm drainage facilities
139-140; 144-148

- Manhole
 junction losses 112
- Manhole(s) 27
 ladder 30
 reinforcing 29
 slip joints 29
 steps 31
 tops 28
- Manning Equation 101
- Materials
 descriptions and specifications
 T1.16, 35
- Metal contamination 48
- Minimum cover for aircraft loads
 T7.17-T7.19, 210-212
- Minor system of storm drainage
 facilities 37, 39, 139, 142
- Moment
 of inertia and cross-sectional area
 T7.4, 199
 strength 217
- P**
- Pavings 34
- Perforated pipe 11
 in recharge trenches 190
- Permeability coefficients T6.2, 177
- Pipe-arches 197
 elbow fittings T1.15, 24
 sizes and layout details
 T1.7-T1.8, 13
- Pipe backfill 191
- Planning of urban drainage systems 39
- Point source and recharge system 179-180
- Pollution and runoff 40-44
- Porous pavements and runoff 43
- Preface 3
- Products, Sewer, Steel, Chapter 1** 7-35
- Profiles of pipe T1.1, 8
- Protective coatings 226
- R**
- Railway
 live loads T7.3, 199
 loadings 193
- Rainfall
 estimation 56-57
 hyetographs 57-62
 intensities 57, 58
 intensity duration frequency T5.5, 145
- Rational method, limitations of 65
- Recharge trenches
 construction of 188-191
- References
 durability 230-231
 hydraulic design of storm sewers 159
 hydraulics of storm sewers 123
 hydrology 86-87
 maintenance and rehabilitation 287
 storm drainage planning 53
 stormwater detention and
 subsurface disposal 191
 structural design 218-219
- Reported maintenance practice 281
- Resistivity values (typical) T8.1, 229
- Retention
 systems 172-175
 wells 175
- Rooftop detention 163-164
- Roughness and friction formula
 coefficients T4.8, 101
 Manning's Equation 101
- Round fittings, dimensions
 minimum T1.14, 23
- Runoff
 coefficient 65-66; T3.4, 66
 curve numbers T3.5, 68
 estimation of 64-65
 quantity of, reduction of 40-44
 waters, environmental
 considerations 46-52
- S**
- Saddle branches 25
- Sewer
 appurtenances 21-31
 design (storm) preliminary T5.6, 150
 installation 253-273
 jet flushers 280-281
 Products, Steel, Chapter 1 7-35
- Shapes of CSP T1.1, 8
- Shear strength 217
- Sizes of CSP T1.1, 8; T1.2-T1.6,
 8-12
- Slip joints, manhole 29
- Slotted drain inlets 32
- Soil
 cohesive vs. cohesionless 258-259
 conditions 217
 investigation infiltration tests
 176-177
 tightness 217

- Stable slope angles for various cohesionless materials T10.1, 259
- Steel Sewer Products, Chapter 1** 7-35
- Stiffness of pipes 195-196
- Storm Drainage Planning, Chapter 2** 37-53
- facilities, design of 139-159
- facilities, layout of 139
- Storm Sewers, Hydraulic Design of, Chapter 5** 125-159
- Stormwater Detention and Subsurface Disposal, Chapter 6** 161-191
- Stormwater
- detention facilities 161-163
 - detention facilities, design of 165-169
 - inlets, hydraulics of 113-122
 - management 38
- Strength considerations in structural design 194-195
- Structural Design, Chapter 7,** 193-219
- for CSP field joints 214-218
- Structural plate
- arches, representative sizes T1.11, 16
 - pipe-arches, sizes and layout details T1.10, 15
 - pipe description 7
- Subsurface soil information 253
- Surface detention 161
- Surface infiltration and runoff 43
- Surface water profiles in hydraulic design 106-107
- Surging and pumping for cleanout 280
- Synthetic filter fabrics 191
- T**
- Testing joint tightness 264
 - Thickness of pipe T1.1, 8
 - Time of concentration 73-74
 - Transitions 26
 - losses (open channel) 109
 - losses (pressure flow) 109-111
 - Trench
 - construction in noncohesive soil or sand 188
 - construction in permeable rock and/or stable soil 188
 - dewatering 261-262
 - excavation 255-260
 - maintenance 276
 - shape 257
 - stability 258-259
 - stabilization systems 259-262
- U**
- Underground
- conduits, moment of inertia and cross-sectional area T7.4, 199
 - construction 267-268
 - detention 161
- Unit hydrograph
- determination 77-78
 - methods of S.C.S. 79-80
 - rectangular 80-81
- V**
- Vacuum pumps for cleanout 279
- Value Engineering and Least Cost Analysis, Chapter 9** 233-251
- Volume reduction measures T2.1, 41
- W**
- Wastewater
- treatment 46-48
- Waterjet spray for cleanout 279
- Water quality
- effects of runoff on 44
 - process (ground) 48-51
- Watertightness 218
- Waterway areas for standard sizes of CSP T4.1, 98
- Weight of CSP T1.2-T1.5, 8-11
- Wells, maintenance of 276-278
- Z**
- Zero increase in stormwater runoff 38
