

2017 EDUCATIONAL OUTREACH PROGRAM COLLEGE AWARD

The Corrugated Steel Pipe Institute is a Canadian Trade Association that is committed to education regarding the wide spread and appropriate use of corrugated steel pipe for drainage and other civil engineering applications. Our educational outreach program involves visiting technical colleges to present seminars on the subject. We publish “The Handbook of Steel Drainage and Highway Construction Products” along with other technical material that is available at www.cspi.ca. Our ultimate goal is to present a copy of the handbook to every civil engineering technologist student before they graduate, as we believe it will be a valuable resource in their professional careers.

Student Awards are an integral part of the CSPI EDUCATIONAL OUTREACH PROGRAM. We encourage students to incorporate some aspect of corrugated steel pipe and the handbook in their studies.

The National College Competition will recognize the best design project that incorporates corrugated steel pipe as a major component of the project. Projects may be submitted by teams or individuals.

Prize \$1,800.00

Projects will be judged on technical merit considering all components of design as described in “The Handbook of Steel Drainage and Highway Construction Products”. The paper should outline the reasons for selecting CSP in a particular application. Creativity and innovation will be recognized.

The deadline for all of the entries is May 12th, 2017. Any entries received after that date will be considered for the following year’s awards. The awards will be announced at the CSPI Annual Meeting which is held every year in June. Entries and any questions should be addressed to:
